€30million investment

OnePlastics have a strong tradition of continuing investment, with €30million spent during the last three years. It has seen the opening of a new Midlands based Logistical Centre and the rolling out of a new fleet of delivery vehicles.

2017 has seen a further 2700 tonne Krauss Maffei injection moulding machine installed at our Rotherham facility, providing additional custom moulding capacity.

The Rotherham site not only produces around 2 million wheelie bins per year, but also specialises in the production of larger items including plastic pallets, material handling items, cable troughs & gullies. The site also boasts a class-leading carbon footprint and is certified as 'zero to landfill'.

Shot weights across the three UK manufacturing sites range from a few grams to over 28kg, meaning that the Group can offer a custom moulding service that few other companies can match. The latest 2700 tonne machine delivered this March brings the Group's portfolio to **nine machines above 2000 tonnes** locking force.

On the back of its world class machine park, OnePlastics have also recruited and developed class leading factory management teams capable of outstanding efficiency & reliability.

In the spring of 2017, the new 44,000 square foot Logistics Centre opened in Tamworth. This facility utilises a 'Snapfulfil' stock control system and has freed up additional space for new production equipment at the nearby manufacturing site.

Distribution of finished goods will be aided by a new fleet of 20 articulated curtain-sided trailers, the first of these delivered recently. The trailers and liveried curtains were all sourced from local suppliers, and the project was jointly managed with Central Hub Logistics.
